GMT housecroft and
constable chemistry 4th pdf

- The dividing line between
metals and nonmetals can
be found, in varying
configurations, on some
representations of the
periodic table of the
elements (see

mini-example, right).

Elements to the lower left
of the line generally display
increasing metallic
behaviour; elements to the
upper right display
increasing nonmetallic
behaviour. Dividing line

between metals and
nonmetals - Wikipedia - A

metalloid is a type of
chemical element which has
properties in between, or
that are a mixture of, those
of metals and
nonmetals. There is neither a
standard definition of a
metalloid nor complete
agreement on the elements
appropriately classified as
such. Despite the lack of
specificity, the term
remains in use in the
literature of chemistry.. The
six commonly recognised
metalloids are boron ...
