

how the whale became and other stories

Thu, 06 Dec 2018 20:05:00 GMT how the whale became and pdf - Phylogeny. The whales are part of the largely terrestrial mammalian clade Laurasiatheria. Whales do not form a clade or order; the infraorder Cetacea includes dolphins and porpoises, which are not considered whales. [citation needed] The phylogenetic tree shows the relationships of whales and other mammals, with whale groups [citation needed] marked in green. Fri, 07 Dec 2018 19:35:00 GMT Whale - Wikipedia - The humpback whale (*Megaptera novaeangliae*) is a species of baleen whale. One of the larger rorqual species, adults range in length from 12–16 m (39–52 ft) and weigh around 25–30 metric tons (28–33 short tons). The humpback has a distinctive body shape, with long pectoral fins and a knobby head. It is known for breaching and other distinctive surface behaviors, making it popular with ... Humpback whale - Wikipedia - Given concerns on the effect of acoustic pollution on Cuvier's beaked whale and other beaked whales, efforts are being made to develop strategies that will reduce the chances of beaked whales being accidentally exposed to sonar and other high-intensity noise sources. In particular, the Agreement on the
