Computer Science ... - Soil
is a mixture of organic
matter, minerals, gases,
liquids, and organisms that
together support life.
Earth's body of soil is the
pedosphere, which has four
important functions: it is a
medium for plant growth; it
is a means of water storage,
supply and purification; it is
a modifier of Earth's
atmosphere; it is a habitat
for organisms; all of which,
in turn, modify the soil.
